ICON supplements are designed to deliver nutrients in the optimum amounts and ratios that benefit cattle performance. Select proprietary ingredients provide nutritional support to help the animal cope with exceptional demand and stress.

KEY BENEFITS

CITRISTIM®

An ADM proprietary feed ingredient that may help the animal strengthen its defense against health challenges by supporting and optimizing gut function, gut integrity, and body defense responses.

RUMENEXT®-BEEF

Includes micro-encapsulated plant extracts; contributes to vasodilation which helps facilitate nutrient flow throughout the body while helping maintain feed consumption and water intake during critical extended periods of high heat or extreme cold; helps optimize rumen digestion.

CELL RATE®

Provides nucleotides that nourish natural cell growth and proliferation, which may be beneficial to body function and well-being of the animal, especially under stressful situations (weaning/receiving) or those involving intensive breeding programs (artificial insemination, embryo transfer, and bull development).
