

Targeted Supplementation

AMPT is revolutionizing beef cattle mineral nutrition as we know it today. ADM, a leader in animal nutrition, is leading the charge with a revolutionary new mineral known as AMPT. In recent years, advanced research and new technologies have led to the development of greatly improved mineral sources. Yet, until now, never before has a mineral company combined into one package the technologies found in AMPT. It's what beef cattle need; nothing more, nothing less. AMPT precisely targets optimum nutrient levels, complementing forage, to deliver the best performance. That's the revolution of precision supplementation.

**Join the
revolution.**

Nothing more, nothing less.

AMPT-T

ENDO-FIGHTER/BREEDER

- Hydroxy trace minerals
 - Reduces degradation of biological components
 - Bypass the rumen, reducing the potential for negative interaction
 - Independent research validates higher absorption
- Unique soluble cobalt source facilitates better forage digestion for more available energy
- Select source of magnesium for more availability and more palatability
- No added potassium since forages provide sufficient and in some case excess levels of available potassium to grazing cattle. Limiting potassium in the mineral formulation serves to enhance magnesium availability

AMPT-T FEATURES

ENDO-FIGHTER/BREEDER FEATURES

- **Organic Trace Minerals (Copper, Manganese, Zinc)** — More readily available compared to inorganic mineral sources, which could be crucial to stressed cows; gives cows an edge on mineral absorption
- **Selenium Yeast** – Organic source providing antioxidant properties and is important for immune function, which is especially critical to stressed cattle
- **CitriStim®** — An ADM proprietary feed ingredient that may favorably impact the gut microbial population
- **Natural Source* Vitamin E** – 3x more potent antioxidant activity compared with synthetic vitamin E; has increased long-term retention within the cellular membranes compared to synthetic sources, which contribute to better overall vitamin E integrity needed for reproductive efficiency and proper functioning of the immune system
- **Endo-Fighter® Components** — Patented combination of components shown to favorably support production and well-being of cattle consuming endophyte-infected fescue forage
- **Botanical Extracts** — Known to influence key physiological parameters, supporting rumen function and helping the animal cope with stress

* The source of natural-source vitamin E used in AMPT-T is Nova-E™, an ADM product.
