Thermal Care-R

What to expect?

Shown by research

• Prior to arrival of heat stress
  ➢ Feed intake and milk production may be slightly improved

➢ During heat stress
  ➢ Feed intake may be improved by 1 to 3 pounds
  ➢ Milk production may be increased by 3 to 5 pounds
  ➢ Cows will recover body condition more rapidly due to improvements in feed intake
  ➢ Somatic cell counts may be reduced
  ➢ Seasonal reductions in milk fat may still occur but may be less dramatic
