

Advantages of Pelleted vs Meal Show Feeds

- Improved nutrient utilization
- 5-10% improvement in feed efficiency
- Increased growth performance
- Less sorting of ingredients and wastage at the feeder
- Reduces dust – improving environments for workers and animals
- Handling – improves product flowability
- Reduced feed wastage due to easier feeder adjustment
- Eliminates ingredient segregation as the product is transported through bulk bins, distribution systems and feeders
- Improved digestibility of energy via starch gelatinization in young and grow-finish pigs
- Greater bulk density
